Craig,

The truck load was carrying 22 tons of soil. The soils samples taken at the site showed less than 1% of asbestos. Given the light weight characteristics of vermiculite and that the soils report shows less than 1%, the amount of asbestos must have been less than one pound. With that said, I'll defer to the experts...

Thanks Mike for the report. Do you know what the quantity of soils released during the accident was?

Thanks,
Craig

Craig,

Attached is the incident report from Newman construction and an email from Clean Harbors Environmental Services. Please review and let me know if you have any questions.

Thanks,

Subject: Re: Third West Air Monitor Result

Mike,

Do you know if Newman Trucking has developed the follow-up report to the trucking accident that occurred on the 16th of January. Given the Reportable Quantity for asbestos is 1 pound I don't believe a formal report needs to be filed with the state or feds however Joyce and I would like a report to review and to place in the EPA and the UDEQ site files. Just a short summary of the incident would be sufficient (date/time, incident summary, quantity released, remedial actions taken).

Thanks,

Craig

Joyce & Craig,

We had positive hits on January 26, 2012. All were chrysotile, see the attached. Please let me know if you have any questions or concerns.

Thanks,

Mike Shepherd
